Summary

Software Developer with **4+ years** of production experience — shipping containerised services to **Kubernetes** with **99.9% uptime**, cutting deployment times by **95%** with **CI/CD** in **TeamCity** and **Cloud Build**, and codifying infrastructure in **Terraform** for **100% repeatable** deploys. Comfortable across **GCP**, **AWS**, **Docker**, **Kubernetes** and the **Prometheus / Grafana / ELK** observability stack. Moving deeper into dedicated **DevOps** and **SRE** work.

Experience

Software Developer — Nepa India Production Pvt. Ltd.

Jan 2021 – Present

- **Sampler**
  - **Containerized** the Sampler micro-services using **Docker** and deployed it on **Kubernetes clusters**, optimizing resource utilization and achieving **99.9% uptime**.
  - Developed and maintained automated **CI/CD** pipelines using **Shell Scripts** and **Kotlin** in **TeamCity**, reducing deployment times by **95%** and improving overall release frequency.
  - Set up comprehensive monitoring and logging solutions using **Prometheus** and **Grafana**, and **ELK** stack (Elasticsearch, Logstash, Kibana), improving issue detection and resolution times by **50%**.
  - Utilized **Terraform** to provision and manage cloud infrastructure, ensuring **100%** consistency and repeatability in deployments.
  - Worked closely with development, QA, and operations teams to **streamline workflows**, improving communication and reducing deployment cycle times by **30%**.
- **Campaign Benchmark**
  - Built an in-app **Analysis module** in **ASP.NET Core (.NET 8)** that replaced a legacy **VBA/Excel** tool, letting users configure filter runs, upload FiltersParams JSON to **GCS**, and trigger the **Pub/Sub → Cloud Function → Dataflow** pipeline end-to-end — eliminating a manual two-tool workflow.
  - **Containerized** the application with a **multi-stage Docker** build and deployed it to a production **GKE** cluster behind an **Nginx Ingress** with **Let's Encrypt TLS** and an **OIDC auth sidecar**, enforcing **Auth0 role-based access** at both the proxy and app layers.
  - Set up **Google Cloud Build CI/CD** to build, push to **Artifact Registry**, and roll out to **Kubernetes** on every merge, reducing release turnaround to a **single push**.
  - Integrated **GCP Workload Identity**, **Secret Manager**, and the **External Secrets Operator** so no credentials live in the cluster or repo, with the **SQL Server** connection string sourced directly from Secret Manager at runtime.
  - Shipped **Dataflow job status polling** with a background sweep, in-app result **CSV downloads**, and a pre-submit **Summary modal** with per-campaign breakdown and CSV export, letting power users monitor and retrieve results without leaving the app.
- **Dashboards Admin - CX Brand Tracker**
  - **Developed** and **maintained** an intuitive **UI** using **Vue JS** and **.NET Core Web API,** replacing the manual JSON file editing process and increasing operational efficiency by **90%.**
  - Implemented automated build and deployment pipelines using **TeamCity** and managed **GCP** resources for application **deployment**, ensuring **efficient** and **scalable delivery**.
  - Automated **JSON** file uploads to **Google Cloud Storage (GCP)**, eliminating the need for manual uploads and improving the speed of data availability by **95%**.
  - **Containerized** the application using **Docker** and managed deployments with **Kubernetes**, achieving **99.9%** uptime.
  - Integrated **Slack** with **TeamCity** using Slack APIs to improve issue detection and resolution times by **50%**, providing custom notifications for build failures, deployment successes, and critical events.
- **Virgin Voyages Admin Panel**

- ◇ Developed an application using **Vue JS**, .NET Core MVC, **Kafka**, **Docker**, **Kubernetes**, and **Postgres** for managing surveys and market research data.
- ◇ Created functionality for **setting survey questions** of various types (multi-select, single-select, description-based) and integrating market research terms with a survey health tracking system.
- ◇ Used **Kafka** for sending notifications to users when surveys were available, improving user engagement and response rates.
- ◇ Built a comprehensive dashboard to track **respondents, valid surveys, and invalid surveys**, providing detailed analytics for decision-making using marketing research terms.

Technical Analyst — **Nepa**

Oct 2020 – Dec 2021

- ◇ Worked on creating **R-shiny dashboard** setups.
- ◇ Managed infrastructure to support sales and ensure high availability and scalability of services.
- ◇ Researched, troubleshooted, and identified solutions to resolve system issues which involves observing and working with CI/CD pipelines.
- ◇ Performed **data validation** and **data cleaning** to ensure data quality and accuracy for machine learning model training and dashboard use cases.

Data Analyst Intern — **Serturner**

May 2019 – May 2020

- ◇ Designed and implemented data pipelines.
- ◇ Worked on collecting, cleaning, transforming, and feature engineering on various data sources using **Pandas**, **SQL** and **Python**.

Technical Skills

Platform: Linux

Containerization Tools: Docker, Kubernetes

Cloud (Azure, GCP): Virtual Machines, Storage, Load Balancer, IAM, Virtual Network

Programming languages: Bash, JavaScript, VueJs, Python

CI/CD Tools: Teamcity, Cloud Build (GCP)

Version Control Tools: Git, GitHub

Monitoring Tools: Grafana, Prometheus

Automation Tools: Terraform

Ticketing Tools: Kanban, Slack, Jira

Education

Dr. Babasaheb Ambedkar Technological University — Lonere Maharashtra
Bachelor of technology in Infomation Technology — *2014 - 2018*
CGPA: 7.18

Activities and Interests

- ◇ Drawing, Travelling, Chess, Mobile Games, Painting, Puzzles, Playing Cards, Trekking
